

Highest quality fuel line systems built using iTAC Software AG's Manufacturing Execution System

Automotive supplier Veritas implements product traceability with the iTAC.MES.Suite

Dernbach, September 18, 2012 – Veritas AG (www.veritas-ag.de)

delivers cross-function solutions providing connection, sealing and transportation components in automobiles, developing hundreds of product variants every year. High quality is a critical success factor with this wide range of product variants. That's why Veritas has chosen iTAC Software AG's (www.itacsoftware.de) Manufacturing Execution System (MES). In future, the iTAC.MES.Suite will guarantee full traceability of Veritas fuel line systems. The roll-out will commence at the Gelnhausen production facility.

Veritas is a traditional, but modern family owned company based in Gelnhausen. It has global operations as an automotive supplier and employs more than 4500 people in 12 plants. Among the main reasons why the company opted for iTAC's MES software were its integrated and versatile product traceability function with special interlocking mechanisms and the ability to provide deep ERP integration to FOSS/Ordat.

The MES solution will be rolled out in the fluid line assembly at the Gelnhausen plant. Deployment scenarios for the company's other sites are currently being planned.

Traceability and interlocking in one single system

iTAC has gained another renowned automotive supplier as a customer, consolidating its leadership as an MES provider in the automotive supply segment. "Product traceability is extremely significant in this market segment. The growing diversity and complexity of automotive components makes this kind of quality assurance indispensable. iTAC's exemplary interlocking mechanism practically rounds off the complete traceability function, providing maximum process security and optimally eliminating potential defects in advance," explained Kurt-Robert Käppeler, Head of Strategic Projects - Process Development at Veritas AG.

About iTAC Software AG

iTAC Software AG is a system and solution provider specializing in Manufacturing Execution Systems (MES) with an effective production philosophy. In accordance with this philosophy, iTAC develops, integrates and maintains its platform-independent iTAC.MES.Suite for manufacturing enterprises around the world. The software facilitates considerable quality improvements along the entire process and production chain up to zero defect production. The service architecture comprises a comprehensive range of functions such as Traceability, Production Management, Advanced Production Scheduling, Computer-Aided Quality and Material Logistics, plus add-ons. As a result of its high level of standardization and technological basis, the iTAC.MES.Suite can be used for practically all factory manufacturing operations. iTAC Software AG is headquartered in Germany and has branch offices in France, the USA and China.
